

PROFILER ANGULAR

Limitless mounting possibilities!

The Profiler Angular is just one more powerful positioning tool in the CJT mounting line. For over 15 years, the Angular has proven its durability and positioning capability. With the additional arm and joint, the Angular is capable of securely attaching to places on wheelchairs not available to traditional mounting systems.

The Angular has the ability to attach to the cross bar under the seat pan which makes it the perfect choice for those wheelchairs with limited space on the outside frame. Made of high quality aircraft aluminum the Angular is lightweight and sturdy allowing it to attach to small pediatric wheelchairs without interfering with the balance or stability of the chair.

Advantages:

- Backed by the "CJT's Helping Hand" support system
- Capable of positioning on more than one plane
- Durable and lightweight
- Attaches to either the left or right side without requiring special adaptations
- Works with a variety of wheelchairs, walkers and other adaptive equipment
- Works with virtually any communication device, laptop or tablet technology
- Successfully attaches to sit to stand wheelchairs
- Easy to release from the base with the removal of the ball lock pin
- Easy to swing away and lock into position
