

PROLITE

A perfect solution for mounting small lightweight devices

Designed to work with small, lightweight devices the ProLite is simple to use and offers a variety of options. The ProLite's streamlined profile makes it appealing to an individual, while its flexibility and durability allow the ProLite to meet the individual's specific needs.

The ProLite is available in two adjustable lengths, 9-16 inches and 16-21 inches. The device width-tube starts at 5 inches and extends out to 9 inches. The ProLite's small base allows for the opportunity to attach the mount to even more places on the chair.

Depending on the width-tube option you choose, the ProLite can become a device mount, an extended switch mount or an arm sling system.

Advantages:

- Backed by the **"CJT Helping Hand"** support system
- Capable of virtually unlimited positioning on more than one plane
- Manufactured from high quality aircraft aluminum and steel
- Durable and lightweight
- Attaches to either the left or right side without requiring special adaptations
- Easy to release from the base with the removal of the attached pull pin
- Easy to swing away and lock into position
